❑Press [Security] to turn the alarm on or off (screen below will appear)

❑To arm the system: Choose the desired profile to activate sensors.
The chosen icon will turn Red and will emit "beep beep".

Note: System has a built-in delay time before sensors are activated (delay time is configured in settings).

❑To disarm the system: Press "off." Password box appears. Input password. (Default password is 1234 and can be changed in "settings" menu.)

Note: You can disarm the system during the built-in delay time without having to input a password.

❑When alarm sensor is triggered, the indoor monitor will emit a loud alarm, and the and the screen below will appear. An alarm will be sent to the management center (if management center is installed):

❑You can see the sensor No. and type in Red, shown at the top of the screen. For example, "2: Smoke" indicates that a smoke sensor in zone 2 is triggered. To stop alarm, input the password (the default password is 1234).
* Will be available if building is equipped with integrated alarm / smoke sensors.
**Concierge**

❑Press [Concierge] to call concierge
